Erklärung zur Abschlussarbeit gemäß §22 Abs. 7 und §23 Abs. 7 APB der TU Darmstadt

Hiermit versichere ich, Max Mustermann, die vorliegende Bachelorarbeit ohne Hilfe Dritter und nur mit den angegebenen Quellen und Hilfsmitteln angefertigt zu haben. Alle Stellen, die Quellen entnommen wurden, sind als solche kenntlich gemacht worden. Diese Arbeit hat in gleicher oder ähnlicher Form noch keiner Prüfungsbehörde vorgelegen.

Mir ist bekannt, dass im Fall eines Plagiats (§38 Abs. 2 APB) ein Täuschungsversuch vorliegt, der dazu führt, dass die Arbeit mit 5,0 bewertet und damit ein Prüfungsversuch verbraucht wird. Abschlussarbeiten dürfen nur einmal wiederholt werden.

Bei der abgegebenen Thesis stimmen die schriftliche und die zur Archivierung eingereichte elektronische Fassung gemäß §23 Abs. 7 APB überein.

Bei einer Thesis des Fachbereichs Architektur entspricht die eingereichte elektronische Fassung dem vorgestellten Modell und den vorgelegten Plänen.

Darmstadt, den 22. Oktober 2019

Signature

Abstract

Write a short summary of your thesis. Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

List of Abbreviations

API	Application Programming Interface
CQ	Completion Queue
DBMS	Database Management System
DMA	Direct Memory Access
HPC	High Performance Computing
IB	InfiniBand
MPI	Message Passing Interface
NIC	Network Interface Controller
OLAP	On-line Analytical Processing
OLTP	On-line Transactional Processing
QP	Queue Pair
RAM	Random Access Memory
RDMA	Remote Direct Memory Access
RNIC	RDMA-enabled Network Interface Controller
RoCE	RDMA over Converged Ethernet
RQ	Receive Queue
RR	Receive Request
SDN	Software Defined Networking
SQ	Send Queue
SR	Send Request
TLB	Translation Lookaside Buffer
TCP/IP	Transmission Control Protocol/Internet Protocol

1. Introduction

1.1. Context and Motivation

This is a dummy citation [1]. And this is an example of using an acronym which was defined previously Remote Direct Memory Access (RDMA). The long form of the acronym is only used the first time, the short form is RDMA.

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

1.2. Problem Statement

1.3. Goals and Contributions

1.4. Thesis Outline

Describe what the thesis contains

2. Background

In order to grant a better understanding of the subsequent chapters, this chapter is going to provide a background to the terms and concepts used in the thesis. . .

2.1. Remote Direct Memory Access (RDMA)

RDMA is an alternative to the traditional Transmission Control Protocol/Internet Protocol (TCP/IP) network communication protocols. In short, RDMA can provide access to a remote machine's memory without performing unnecessary intermediate copies of the memory while also bypassing the CPU of the remote machine.

RDMA has been gaining traction in the academic community (Figure 2.1). This growing popularity is because RDMA overcomes some limitations by TCP/IP, and by doing so, helps to provide high bandwidth and low latency. Therefore, in order to explain RDMA, the shortcomings of TCP/IP socket programming is stated, and thus motivating the benefit of RDMA.

Figure 2.1.: Google Scholar hits of RDMA keyword

3. Design

This chapter presents the design behind...

3.1. Requirement Analysis

In order to better understand the requirements, the different trends in... Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

4. Implementation

Explain how the concepts you developed were implemented. Focus on interesting/challenging details.

4.1. Implementation Overview

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

5. Evaluation

To evaluate the performance and usefulness of...

5.1. Experimental setup

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

6. Conclusion and Future Work

This chapter first summarizes and concludes the contributions of this thesis by presenting the strengths behind the design concepts and concluding upon the evaluation. Following, an outlook of research challenges for future work is given.

6.1. Conclusion

Mirror the contributions given in intro.

Conclude on the evaluation Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

6.2. Future Work

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

A. Experiment Parameters

The experiments conducted in the Evaluation Chapter were executed with the following DPI parameters. Note, an x indicates the parameter has been varied for the experiment.

	Message size	Segment size	Ring size (segments)	Internal output buffer size
Exp. A	x	64 MiB	10	8 MiB
Exp. B	x	x	100	4 MiB
Exp. C	4 KiB	64 MiB	10	x
Exp. D	4 KiB	32 MiB	x	4 MiB
Exp. E	4 KiB	x	x	4 MiB
Exp. F	x	32 MiB	50	8 MiB
Exp. G	x	64 MiB	50	4 MiB
Exp. H	8 KiB	4 MiB	x	2 MiB
